Women Empowerment

What is female empowerment?

Woman empowerment is an issue of great significance in the modern perspective. The feminist movement that first raised the need for women's empowerment started in 1800s when women demanded their right to vote in Britain. Since then, there have been two more waves of the feminist movement on a global basis. Women's empowerment can be defined as very easy decision related to their life themselves and live well in family and society. To empower them to achieve their true rights in society, woman empowerment is necessary.

Why is Women's empowerment needed in India?

The famous quote by Jawaharlal Nehru, "To awaken people, women need to be awake". Once she takes her step, the family moves forward, the village moves forward and the nation is oriented towards development. In India to empower women, first of all is necessary to kill all the demonic thinking that kill their rights and values in society, such as dowry practice, illiteracy, sexual violence, inequality, domestic violence against women, rape, vaisyavarniti, human trafficking and other such topics. Gender discrimination brings cultural, social, economic and educational difference in the nation, which leaps back towards the country. Empowering women to ensure

the rights to equality mentioned in the Constitution of India is the most effective way to eradicate such evils.

As we all know that India is a patriarchal society where every field of man is interfering with money and women take responsibility only for family and also there are many restrictions. Approximately 50 percent of India's population is only women, it means that this half way is needed for the development of the whole country, which is still not strong and bound to many social restrictions. In such a situation, we cannot say that in the future, our country, will be able to grow without strengthening our half population. If we want to develop our country then it is important that women empowerment be encouraged by the government, men and women themselves to prove the idiom of "unity in diversity".

Some bad practices against women were removed by people of open thoughts and great Indians, who raised their voices for discriminating against women. Because of the constant efforts of Raja Ram Mohan Roy, the Brits were forced to abolish Sati practice. Later, other Indian social reformers like Ishwar Chandra Vidyasagar, Acharya Vinoba Bhave, Swami Vivekanand etc. also raised their voices for women's uplift and fought hard. Ishwar Chandra Vidyasagar started the Widow Remarriage Act, 1856 with its constant effort.

In the past few years many government has created and implemented several constitutional and legal rights to remove gender inequality and bad practices against women. There are certain Act passed by Parliament to empower women with legal rights -

An Equal Remuneration Act, 1976, Dowry Stop Act 1961

Unethical Trade (Prevention) Act 1956, Medical Termination of Pregnancy Act 1987, Child Marriage Prevention Act 2006, Gender Testing Techniques (Prevention of controller and misuse) Act 1994, Women's Sexual Abuse Act 2013 at work.

The modern society is more aware of women's right, which resulted in many self help groups and NGOs working in this direction. Women are more open minded and breaking social bonds to gain their rights in all dimensions. However, crime is going on simultaneously.

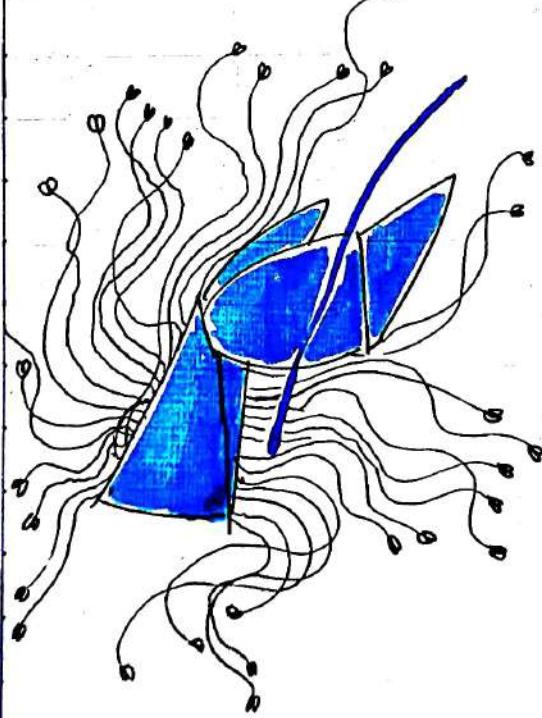

In order to bring women empowerment in Indian society in true sense, it is necessary to understand and remove the main causes of bad practices against women, which is the patriarchal and male influence system of society. It is necessary that we change old thinking against women and make changes in constitutional and legal provisions.

TRUST

Years to build, minutes to break
Fragility in its perfect state
Effected by envy, effected by fate
But somehow manage to build mates.
Unbreakable is promised to be.
Ironically, this is the one that
find mates.
Still people adore it, accept it,
Maybe for the sake of those
who does not deserve it.
Through hurdles, difficulties, it find its way
Maga, as it can make someone stay
Yet, trust is something to hold on.
Because of all the values
It carries on.

Radiocarbon Dating

It is a method of dating objects up to about 70,000 years in age, developed in 1949 at the University of Chicago. It is of great value in Geophysics, archaeology etc. The method is based on the absorption by living matter of the radioactive isotope of Carbon known as C¹⁴ from the atmosphere, and the cessation of this absorption at death, the content of C¹⁴ diminishes at a known rate and is reduced by one-half during a period of about 5,000 years.

INTERNET & LIFE

Books were the means of information in our early stages. Today the scenario has changed. More and more people are choosing to read e-books rather than paper books. It has turned out to be a boon. Although, certain safety concerns have to be followed, as with boon comes the bane. But to keep ourselves updated regarding information, Internet is the global choice as every sector is highly dependent upon it.

Recently, a pandemic has changed the whole scenario. Its harsh impact has disorganized every aspects of society. Education sector was hugely affected by it. E-learning pepmed up that changed the old school method. E-education was the best bet left. Platforms like Google classroom, Zoom etc. came into light.

While digital learning platforms are currently substituting for regular learning methods, they can complement the traditional in the future as well.

Online education

Online education is one of the latest and imminent trends in the education system. It is a mode of education that is delivered and administered using the internet with the help of advanced technology. This form of education has been made simpler and easier. Online learning is flexible, adaptable and affordable.

Online education is very convenient and user-friendly. People are able to acquire and obtain learning materials easily. This mode of learning provides a myriad of advantages. Its inherent flexibility and easy accessibility are the significant aspects. It can be considered as a boon and panacea in the time of Covid-19 crisis.

Importance Of Cyber-Psychology In Education

Cyber Psychology is the disciplinary study of the mind within the context of human-computer interaction.

Cyber Psychology exists today to give research questions concerning the undeniable link between technology and psychology to help improve the human experience. By collecting raw data and applying that data to solid conclusions, people are applying much better equipments to confront contemporary psychological problems that arise in our constantly collected world.

Internet Of Things

The "Internet of Things" is a system of interrelated Internet connected objects that are able to collect and transfer data over a wireless network without human intervention. This network without human intervention is established embedding the physical objects with sensors and softwares which in turn collects and shares data with other devices over the internet. The usage of IoT are limitless with rapid advancement in the field of science and technology. IoT's are increasingly gaining grounds amongst popular technology trends.

INTERNET CULTURE

The Internet is no longer a web that we connect to. Instead, it is a computerized, networked and inter-connected world that we live in.

The Verge's Internet Culture section is the home for daily coverage of how our entire life is influenced and are influenced by pop culture and the world around us. Some features of Internet culture include online communities, gaming and social media as well as topics related to identity and privacy. The Internet provides an array of tools for people to use for information retrieval and communication in individual, group and mass contexts.
